

# 5 SUPER Tips to Maintain Your System

- ✓ Change your air filter regularly – a dirty filter can restrict airflow and cause your system to work harder than necessary.
- ✓ Keep outdoor units clear and condenser coils clean – debris, leaves and other materials can clog the system and decrease efficiency.
- ✓ Inspect ductwork for leaks – this can cause air loss and can increase your energy bills.
- ✓ Check thermostat batteries – a dead battery can cause your HVAC system to malfunction.
- ✓ Schedule routine professional maintenance services:

Service Agreements from SUPER TEAM Heating & Air include professional help with:

- Lubricating moving parts
- Testing safety controls
- Inspecting electrical connections
- Checking refrigerant levels
